

AMENDMENTS TO THE CLAIMS

1. (Currently Amended) A cleansing polyester fabric, which comprises

(i) a warp consisting of a false twist yarn consisting of polyester multifilament ~~consisting of having~~ ultra fine yarns (monofilament fibrils) of 0.001 to 0.1 deniers ~~or its false twist yarn as warp~~ and

(ii) a weft consisting of a false twisted yarn consisting of the polyester multifilament consisting of ultra yarns (monofilament fibrils) of 0.001 to 0.1 deniers and a high shrinkage polyester multifilament with 10~50% of shrinkage rate in boiling water ~~as weft~~, wherein the fabric weave is a plain weave or twill weave, and the fabric satisfies the following properties;

Sum of warp density and weft density : 220-320 yarns/inch

Thickness of the fabric : less than 0.3 mm

Weight of the fabric 70-180 g/m².

2-3. (Canceled)

4. (Original) The cleansing polyester fabric of claim 1, wherein the ultra fine yarns (monofilament fibrils) of the warp and weft are cross-linked to one another, being distributed and spread, as the surface of the fabric is treated by a friction material.

5-10. (Canceled)

11. (Previously Presented) The cleansing polyester fabric of claim 1, wherein the plain weave or twill weave has a short-repeat interval of at least one selected from the group consisting of 2UP 1DOWN, 1UP 2DOWN, 2UP 2DOWN, 3UP 1DOWN and 1UP 3DOWN.

12. (Previously Presented) The cleansing polyester fabric of claim 1, wherein the warp density is 150-210 yarns/inch and the weft density is 70-110 yarns/inch.
